## MCG, Western Concourse

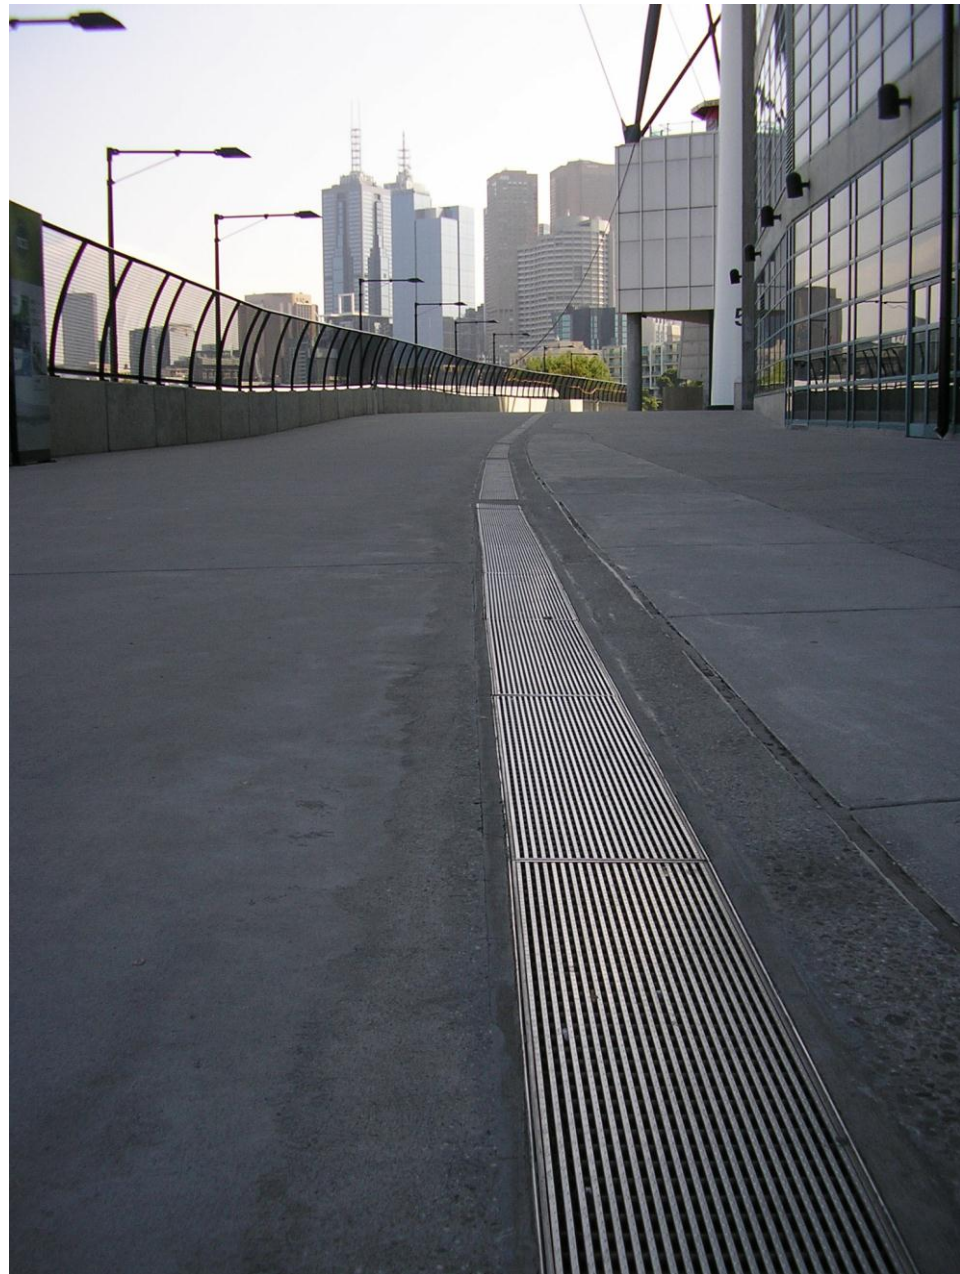

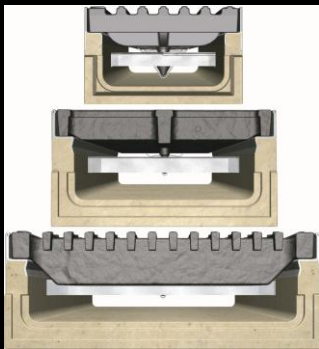

*The MCG has undergone a recent upgrade to the way it manages its stormwater with the redirection of downpipes towards the concourse slab.*

*To collect the runoff, designers were required to provide adequate drainage within the restrictions of the suspended slab and existing plumbing infrastructure.*

*ACO's SlabDrain was deemed to be compact enough to fit within the slab's structural beams. Additionally, every modular unit contains a connection provision which gave designers the flexibility to join it to the pipe network below.*

*Stainless Heelsafe® grates were also selected to meet the safety requirements of spectators.*
