## Suncorp Stadium

*The fifth upgrade of Suncorp Stadium brings new meaning to Brisbane locals and its numerous spectators. Known affectionately as "Stadium City", Suncorp Stadium is linked strategically to Brisbane's transport system with elaborate pedestrian and transport facilities. The stadium's open air terraces, viewing galleries and outdoor BBQ grills allows it to sit harmoniously in its surrounding environment, reflecting the city's subtropical climate and lifestyle.*

*The civic space is modernised with attention paid, even to the selection of the grated trench drain. ACO Drain S200, a neat surface drainage solution allowed the designers to continue the stadium's strong architectural line, use a pedestrian friendly grate and to provide efficient drainage. This was all achieved without disturbing the flatness of the immediate surrounding surface trafficked frequently by pedestrians and vehicles.*

### *Project Details*

Client: Queensland Government  
Product Featured: **ACO Drain**

180 metres of S200 channel and ductile iron Heelguard grating

Other Products Used  
in this Project:

Grated drainage pit with stainless steel Heelguard grate;  
KS200 channel with stainless steel Heelguard grating.
