NOTES:
1. Specific site conditions may require an increase in the concrete encasement dimensions and/or reinforcement. It is the customer's responsibility to ensure the concrete encasement is designed for the application. A minimum concrete strength of 25MPa is recommended. The concrete should be vibrated to eliminate air pockets. Engineering advice may be required.
2. The finished level of the concrete encasement must be approximately 3mm above the top of the channel edge. Expansion and crack control joints are recommended to protect the channel and the concrete encasement. Engineering advice may be required.
3. For further details, refer to ACO's design & site installation files at www.acodrain.com.au/resources
