NOTES:
1. Specific site conditions may require an increase in concrete encasement dimensions and/or reinforcement. It is the customer's responsibility to ensure the concrete encasement is designed for the application. A minimum concrete strength of 25MPa is recommended. The concrete should be vibrated to eliminate air pockets. Engineering advice may be required.
2. The finished level of the concrete must be approximately 3mm above the top of the channel edge.
3. The finished level of the soil to match that of the concrete encasement.
4. For further details, refer to ACO's design & site installation files at www.acodrain.com.au/resources
