NOTES:
1. Specific site conditions may require an increase in concrete encasement dimensions and/or reinforcement. It is the customer’s responsibility to ensure the concrete encasement is designed for the application. A minimum concrete strength of 25MPa is recommended. The concrete should be vibrated to eliminate air pockets. Engineering advice may be required.
2. The finished level of the asphalt must be approx. 3mm above the top of the channel edge.
3. Haunch slopes away at ratio 1:4, or approx 15°.
4. Refer to ACO’s latest installation instructions for complete details
